REQUEST INFORMATION

17 March 2018 - story by [Alumet](#)

ADVERTORIAL - The colour of AluG77 derives from an alloy and a special anodising technique. The advantage of anodised aluminium is that it has an attractive appearance and keeps its metal character. The material is durable, corrosion-resistant and colourfast. It has a solar

reflectivity and an expected lifespan of more than 80 years with low maintenance.

This colour system is also used on the 'Philharmonie de Paris' in Paris and also other projects in Great Britain.
