## REQUEST INFORMATION

18 May 2018 - story by materia

Coffee to Burn pellets are pellets for a pellet stove made from waste materials: coffee grounds (collected at companies) and sawdust (collected at sawmills). The coffee grounds are dried and mixed with the sawdust, before they are pressed into pellets. Both materials have a low CO<sub>2</sub> footprint.

The pellets have a higher caloric value than ordinary pellets, emitting more heat, and contain 25 per cent more energy than other pellets, saving fuel and decreasing CO<sub>2</sub> emissions.

Coffee to Burn is produced in the Netherlands.
